USPTO'S EIGHTEEN-MONTH PUBLICATION

Any non-provisional application (other than for a design patent) filed on or after November 29, 2000 is subject to the eighteen-month publication provisions of the American Inventors Protection Act of 1999 (AIPA). This includes continuation, divisional, and continuation-in-part applications of applications filed prior to November 29, 2000. Only applicants who have not filed or do not intend to file corresponding foreign applications may request that the application not be published. Applicants who wish to keep pending applications confidential should make a request for non-publication at the time of filing.

For patent applications subject to publication, the Official Filing Receipt will include a projected publication date. At least two weeks before the publication date of the application, the Applicant will be mailed a notice with the publication number and publication date. When an application is published, the application will be included on the USPTO home page in the Searchable Patent Databases section (www.uspto.gov) and on the public side of PAIR (see <http://pair.uspto.gov>).

A "Notice of New or Revised Publication Date" may be mailed if the publication date changes by more than six weeks due to processing delays, a secrecy order being removed, or subsequent to the revival of an abandoned application. If the publication date is changed, or the application is not to be published because the application is abandoned and the abandonment is recognized more than nine weeks before the projected publication date, then the Notice of Abandonment will serve as the communication that the application will not be published. If applicant adds or deletes a priority claim so that the 18-month publication date is changed, applicant will be mailed a corrected filing receipt, informing applicant of the newly assigned publication date.

In the AIPA, Subtitle E – Domestic Publication of Patent Applications Published Abroad, Section 4504 on Provisional Rights provides that an eventual patentee will be able to obtain a reasonable royalty from any person, having actual notice, who "infringes" the claimed invention during the period beginning on the date of publication of the application and ending on the date the patent is issued. The right to recover a reasonable royalty is based upon actual notice and is only available if the invention as claimed in the patent is substantially identical to the invention as claimed in the published patent application.
